

Power Industry Deployment Pack

Are Your Crews Protected?

Each year the Power Industry sends teams to remote areas to restore electricity and repair downed power lines. Especially during hurricane season there is limited access to Emergency Medical Services.

Are you prepared to deal with potential medical emergencies? Or will you only have a band aid box to treat it? Will an injury worsen or a death occur because of delayed care?

The Unexpected Happens

It only takes a second for an unexpected injury. A tree limb snaps while using a chain saw to clear a line causes a broken arm, or slips and gashes a thigh. Windy conditions can create an accidental grounding and a lineman gets a flash burn on his face, chest and arms. What if someone gets hit by lightning or goes into sudden cardiac arrest? Will they survive?

After a Hurricane

Your crews work long days in the heat and humidity. They may be in remote areas, or areas that aren't readily accessible by a Fire Truck or Ambulance. Fire Rescue is busy with their own problems. They may be thirty minutes away. In the Florida Keys, you may be the first ones back to restore power. Hospitals aren't up yet. What will you do if someone is severely bleeding? Someone collapses from heat stroke? Someone has a heart attack?

Deployment First Aid Pack Specifically Designed for Power Industry

Altra Medical put together a Deployment Pack that contains all the First Aid equipment you will need for lay responders to help protect your linemen and crews until you can get them to a hospital. These were designed based on the needs of the Power Industry in Florida. Reviewed by Safety Managers and EMT's, Safety Directors. It is the most comprehensive pack put together to meet your needs.

Typical bandaid box kits don't provide adequate First Aid equipment. Our Pack contains state of the art quick clot bandages, Water Jel burn sheets, and the best AED in the industry so that you are well prepared.

Protect Your Linemen Who Work in Bad Weather, Dangerous Conditions and Remote Areas

- Electrocution
- Burns
- Blunt Trauma
- Heart Attacks
- Falls
- Fractures & Broken Bones
- Cuts and Bruises

- Respiratory Problems
- Severed limbs
- Bites & Stings
- Diabetic Shock

Deployment Pack with Philips FRx AED

Includes All Equipment in Easy to Stow Pack

This pack includes all you will need in one durable, water proof pack that will fit in a supervisor's truck under the back seat. Keep a Deployment Pack ready for each team this hurricane season. So it is ready to go on short notice. Supplies don't need any special storage. Easy to follow First Aid instructions included.

Latest Water-Gel Burn Sheets, Quick Clot Dressings, AED and more...

The Pack is complete with a full range of Water-Gel™ burn sheets sized to treat electrical burns to the face, arms, chest, hands and feet. Patented Lidocaine based solution eases pain, provides sterilized protection and avoids fluid loss the most serious concerns until transport to the hospital.

Hemostatic gauzes and dressings included will stop most major bleeding. Developed during Desert Storm, these easy to use new bandaging materials quickly clot blood and can help save limbs, prevent shock and quickly stop serious bleeding. The Pack also contains a full complement of bandages, gauze, abdominal pads, and anti-bacterial washes to clean wounds, stop bleeding and stabilize until professional treatment can be obtained. Traditional knuckle bandaids and fingertip bandaids included for typical wire cuts, scrapes and splinters.

Seconds count in cardiac arrest. You can't wait for EMS. Included is a Philips HeartStart FRx Automated External Defibrillator. Designed to 500 pound crush test, water jet spray and high dust loading, it is rugged enough to stand up to your environment in a Bucket or Line truck.

Chest pains, blunt trauma, difficulty breathing. Trying to determine how serious the problem is, do you need to Life Flight them out? The Pack includes emergency oxygen, a pulse oximeter to determine heart rate and oxygen in blood, and blood pressure monitor. These are easy for lay people to use – and communicating these simple vital signs can help make critically important decisions and buy time when waiting for EMS to arrive.

Complete assortment of emergency equipment for remote areas - AED, oxygen, blood pressure monitor, quick clot, burn gel, bandages, splints, snake bite kit to eye wash, even a soft stretcher to extricate from difficult areas. All your team will need for deployment in rough conditions.
